Leuß antigens can be obtd. for diagnostic and therapeutic use. The presence or absence of Leuß on CD4+ T-cells identifies suppressor-inducer and helper-inducer CD4+ T-cell subsets. Soluble forms of Leuß can act as antiinflammatory agents by reducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              isolated from a human T-cell library using a novel immunosele cloning method. The longer insert (AAT14723) contained 2,350 residues, while the shorter lacked 436 internal residues. A r
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cloning of cDNA encoding cell surface antigen - useful for isolation of diagnostic and therapeutic proteins \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2 cDNA clones encoding Leu8 determinants

Its amino acid sequence was deduced from a human tonsil cDNA clone (AAT72270). Together with ELAM-1 and GMP-40, LAM-1 defines a new family of homologous structures that are expressed by different cell lineages and which can function as receptors in cellular interactions. LAM-1 can be used as an antigen to raise antibodies capable of preventing adhesion, migration or infiltration into tissues of cells expressing the protein, or to identify antagonists useful for the treatment of tissue damage, autoimmune disorders, cancer, or organ

                                                                                                                                                                                                                                                                                                                                                                               The method is based on transient expression of an antigen in eukaryotic cells and physical selection of cells expressing the antigen by adhesion to an antibody-coated substrate. It is useful for the isolation and cloning of any protein which can be expressed and transported to the cell surface membrane of a eukaryotic cell, and was used to clone genes (see AAV63442-63) encoding cell surface antigens from mammalian lymphocytes (see AAW80440-55). The purifice genes and proteins are useful for immunodiagnostic and
                                                                                                                                                                                                                                    mediates adhesion to specialised endothelial cells of lymph nodes, is quite specific in its recognition of the lectin ligand sulphated galactosyl ceramide (sulfatide). Modification of the specificity of this binding could serve to regulate the homing potential of resting T cells. Soluble forms of Leu8 can act as antiinflammatory agents by reducing lymphocyte migration.
                                                                                                                                                                                                                                                                                                                                   immunotherapeutic applications, including the diagnosis and treatment of immune-mediated infections, diseases, and disorders of animals, including humans. The extracellular domain of Leu8, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This polypeptide comprises human Leu8 antigen. Its amino acid sequence was deduced from the nucleotide sequence (see AAV63450) of a cDNA clone isolated from a T lymphocyte cDNA library using a novel method for cloning cDNAs from mammalian expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New cloning vector and polylinker - based on existing sequences for efficient cloning and expression of mammalian cDNA(s), especially human lymphocyte antigenic sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-DEC-1992;

Its amino acid sequence was deduced from the nucleotide sequence (see AAV81217) of cDNA clone isolated from a Tlymphocyte cDNA library using a novel method for cloning cDNAs from mammalian expression libraries.
                                                                                                                                                                                                            Lymphocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 14; Column 67-70;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   N-PSDB;

the antigen by adhesion to (panning on) an antibody-coated substrate such as a culture dish. CSA nucleic acids isolated by the method of the invention, and the proteins they encode, are useful for immunodiagnostic and immunotherapeutic applications, including the diagnosis and treatment of immune-mediated infections, diseases, and disorders in animals, including humans. These disorders include asthma, immune-complex disease, amyloidosis, parasitic diseases or multiple sclerosis. The ability to interfere with the binding of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-DEC-1992;

                                                                                                                                                                                                           The present sequence is that of a T-cell specific Leu8 antigen, as predicted from 1 of 2 clones (see AAA50596) isolated from a human T-cell library by the method of the invention. A shorter Leu8 antigen is given in AAY96184. The method, designed to isolate cell surface antigen (CSA) cDNAs, is based upon transient expression of a CSA in eukaryotic cells and physical selection of cells expressing a CSA in eukaryotic cells and physical selection of cells expressing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     such binding to occur on surfaces other than lymphocyte cells, can be useful in diagnostics and therapy. The level of activated Leu8-T-cells relative to resting Leu8+ cells could serve as a measure of immune response to a particular antigen. Modification of the specificity of the extracellular domain of Leu8, which mediates adhesion to specific endothelial cells of lymph nodes, could serve to regulate the homing potential of resting T cells. Soluble forms of Leu8 could act as antiinflammatory agents by radmain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         lymphocyte cell surface antigen polypeptide sequences

(AAU02452-AAU02452) are described in the present invention. The invention

(CAAU02453-AAU02452) are described in the present invention. The invention

(CI can are invention of cloning cDNA encoding cell surface antigens

(CI can efficient construction of cDNA libraries. Also described are 2

(CI caxpression vectors (AAS03171, AAS03174) which provide high level

(CI caxpression in eukaryotic host cells. A genetically engineered cDNA

(CI camino acids 1-134 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-134 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-134 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-134 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-134 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-134 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144-759 of the CD28 cDNA sequence (AAS03175) is also

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-144 given in AAU02437) and/or comprising nucleotides

(CI (Amino acids 1-14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

c encoded by discrete genes. The hybrid immunoglobulin chain combines
C the adhesion/targetting of a ligand binding partner (LBP) with the
C effector functions of immunoglobulin and can bind to and/or activate
more than one ligand. It can be used diagnostically for the in
Vitro assay of LBP and their targets; or therapeutically to deliver
CLBP such as toxins, enzymes, growth factors to particular cells.
C Typical applications are as antiviral, neuromodulating and
C treating graft rejection; inflammation; metastasis of lymphoma etc.)
C The immunoglobulin component increases plasma half life and
C facilitates purification while deletion of the transmembrane region
C facilitates recovery, improves aqueous solubility and removes
C potentially immunogenic epitopes. Variants of the human lymphocyte
C cell surface glycoprotein described in AAR98106 are given in
C AAR98109-R98135. This variant contains an Ala71Ser substitution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB DB
